$$w_k = \frac{b_{k+1} - y}{b_{k+1} - b_k}, \quad w_{k+1} = \frac{y - b_k}{b_{k+1} - b_k}$$

$$p = \mathrm{softmax}(f_\theta(s))$$

$$\hat{y} = \sum_i p_i b_i, \quad L = -\sum_i w_i \log p_i$$

$$b_k = 10, \quad b_{k+1} = 20, \quad y = 12$$

$$\Rightarrow (w_k, w_{k+1}) = (0.8, 0.2)$$
