$$I \in \mathbb{R}^{H \times W \times 3}, \quad P = 14, \quad N = \frac{H}{P}\frac{W}{P}$$

$$F_\theta(I) = [z; f_1; \ldots; f_N] \in \mathbb{R}^{(N+1) \times d}$$

$$z \in \mathbb{R}^d, \quad f_i \in \mathbb{R}^d$$

$$H = W = 224 \implies N = 16^2 = 256$$
