$$\mathcal{L}_{\text{DINO}} = -\sum_{k=1}^{K} p_{t,k} \log p_{s,k}$$

$$p_t = (0.8, 0.2), \quad p_s = (0.6, 0.4)$$

$$\mathcal{L} = -0.8 \log 0.6 - 0.2 \log 0.4 \approx 0.592$$
